EAGLE AND STORK PLUMBING

19 REDDEN STREET
PORTSMITH, CAIRNS QLD 4870

ATTENTION: MR TIM EAGLE

Re: COMPANY REFERENCE

To Whom It May Concern

This reference is provided to recommend Eagle and Stork's workmanship and large scale project experience. The best way to provide a company reference is to provide an overview of two projects we have worked on together. My role in both of these projects was the Project Mechanical Consulting Engineer and Clients Representative.

James Cook University Cairns campus embarked on the second largest district cooling system in Australia with large scale stratified thermal energy water storage (build cost over \$11M). The central energy plant comprised of 11.2MW of chillers with expansion capacity to 15.4MW. Eagle and Stork were the piping subcontractor on the project and delivered, in a highly professional manner, approximately 1.4kM of service trench including an underground chilled water ring main, all of the piping installation within the central energy plant energy facility and associated pumping and component sensing points. The workmanship was of extremely high quality with a level of pride that cannot be detail in a tender or valued in a tender price. The facility has been operating for approximately 6 months without any performance or maintenance issues.

Mareeba Hospital is a fully operating hospital where the chillers, pumps, chilled water control valves and hot water control valves were all replaced whilst maintaining the functionality of the site. The project was difficult and challenging in a number of ways including interfacing with existing piping installations and condition. Eagle and Stork where the piping subcontractor on the project and delivered a high quality installation. The project has been operating for approximately 4 months with early indications of a total site energy saving of more than 24%.

I have no hesitation in recommending Eagle and Stork and would welcome the opportunity to work with Tim Eagle and his team on future projects.

Regards

Craig McClintock

Director / Mechanical Engineer (RPEQ, BE Hon C1, MIEAust, MAIRAH, MASHRAE, QBSA, CMVP)
